

Parkinson Congress: From Knowledge Exchange to Community Experience

The 2026 German Congress for Parkinson's Disease and Movement Disorders, organised by CPO HANSER SERVICE, demonstrated how medical meetings are evolving beyond traditional knowledge sharing into platforms that foster meaningful connections, collaboration and long-term impact.

Held in Leipzig at the historic, but modern equipped Kongresshalle am Zoo under the theme 'From Gene to System: The Kinetic Code', the congress brought together around 1,200 professionals from neurology, research, therapy and nursing. Yet the true value of the event extended far beyond its scientific programme of more than 100 sessions and over 230 speakers. It was the exchange between disciplines and the creation of new networks that made the difference.

Formats such as the Multidisciplinary Forum, hands-on educational seminars and the

Patient and Caregiver Day were specifically designed to bring diverse perspectives together and encourage meaningful dialogue. These interactions helped generate fresh ideas and strengthened collaboration across the movement disorders community.

The congress also highlighted how digital tools can enhance the delegate experience. A dedicated mobile app supported personalised programme planning, networking and interaction, while an active social media strategy extended scientific discussions well beyond the venue itself.

For CPO HANSER SERVICE the focus was not only on delivering a seamless event but on working closely with the scientific partners to create an environment where knowledge transfer, networking and community building could happen simultaneously.

The 2026 German Congress for Parkinson's Disease and Movement Disorders illustrates an important shift in the meetings industry: success is no longer defined solely by attendance figures or the number of sessions delivered. The real measure lies in creating connections that continue to drive progress long after the final presentation has ended.

Participant feedback

‘The programme truly spans the full spectrum, including the very latest unpublished research, which is of great interest to both early-career and experienced neurologists, while also offering outstanding educational opportunities. It genuinely appeals to everyone.’

‘What I particularly appreciated was the combination of educational content and high-quality science, especially the contributions from young researchers in the free paper sessions and poster presentations.’ ‘The congress is excellent: very well balanced, professionally organised, with a great atmosphere and an outstanding venue.’

The congress’s steady growth over the past decade reflects the power of long-term

collaboration. As Core PCO since 2015, CPO HANSE SERVICE has helped drive this evolution, supporting the event’s transformation into a thriving community platform for knowledge exchange and professional connection.
